

# Reviewing Patient Triage with ChatGPT

Case Study 1

# For Healthcare Professionals, what strategies might we use to avoid the issues?

Use deepfake to hide faces but increase patient data in flow

A responsible care provider must oversee the result

Explain

Decentralize

Beats me

Human control and monitoring

Healthcare professionals would make the final decisions.

Always review any analysis made by the healthcare AI, rather than assuming it is right. Or have a healthcare review panel

Create a physician friendly interpretation of the chatgpt results

# For Healthcare Professionals, what strategies might we use to avoid the issues?

Start small, then expand scope. Physicians as the final decision maker every time.

Use output as an independent datapoint

Healthcare professionals + ChatGPT

Adaptable

Use a diverse dataset

Idk

have the ability to look at multiple perspectives in order to come to the best conclusion

Reduce bias by extending dataset

Liability

# For Healthcare Professionals, what strategies might we use to avoid the issues?

Bias

Privacy

Being triaged by a computer.

Physician-patient rapport

Who is accountable for wrong diagnosis

Trust

kindness

Increase confidence in results

Reduced profits

# For Healthcare Professionals, what strategies might we use to avoid the issues?

patient aware of risk

Rationing care

Margins

andreeds.github.io

# For Patients, what are potential ethical, governance, and fairness concerns?

# For Patients, what strategies might we use to avoid the issues?

Consent

Transparency

Final check from healthcare professional

Data encryption

Get permission

Deepfake a health care professional to mimic human interaction

Train the model with unbiased data.

Provide a way for patients to give feedback

Explain what the ai can and cannot do

# For Patients, what strategies might we use to avoid the issues?

Informed consent

Final check from healthcare professional

Have the data created by the patient available for the patient to view.

Increased involvement in the process

Gain trust

Deepfake

Have the option to transfer to traditional care

Hybrid treatment involving a human health care professional

Explain how it works, don't leave them uninformed

# For Patients, what strategies might we use to avoid the issues?

continuous monitoring of AI performance, always have a responsible healthcare professionals oversee the result. Transparency on AI process

Assure them that no privacy data leakage will happen

minimize lawsuits

Use a diverse data set

Thorough explanation

Centralized, coherent explanation from gov or healthcare

Do not give any information regarding the race

andreeeds.github.io

# For Insurance Companies, what are potential ethical, governance, and fairness concerns?

avoid unnecessary tests  
ai as sole coverage transparency  
lots of guidelines roi liability  
small data sets accuracy expensive  
minimize lawsuits cost scams  
too expensive review of data  
bigger coverage  
avoid misdiagnosis  
finding out who is liable

# For Insurance Companies, what strategies might we use to avoid the issues?

Great Lawyers

Proper diagnosis report

Creating their own algorithm

Third party monitoring of the system

Get a good lawyer

higher premiums

Lobbyists

trustee

Maintain current coverage options in addition to AI options

# For Insurance Companies, what strategies might we use to avoid the issues?

Frequent audits

Not saving actual names

Creating a customized model.

andreeds.github.io

# AI-assisted Healthcare Decision-making

Case Study 4

# For Healthcare Professionals, what are potential ethical, governance, and fairness concerns?

# For Healthcare Professionals, what strategies might we use to avoid the issues?

Transparency

Large diverse dataset

Right decision making

Education

Thoroughly analyze decisions that factor in AI

Proper education

You can't avoid issues but you can mitigate them!

Approving the AI results

Opt in to data set

# For Healthcare Professionals, what strategies might we use to avoid the issues?

Involve all stakeholders in decision making.

Better education

Work with the AI

Training

Correct expectancy of model's performance

Double check by professionals/people have final say  
Education on AI  
Education on appropriateness of tool

Using this a tool not as a replacement to clinical decision making

Extensive data analysis and appropriate structuring through the system

Take an ethics workshop :)

# For Healthcare Professionals, what strategies might we use to avoid the issues?

Training

Understand the tool properly

Feedback regarding diagnosis

gain concensus via training & education.  
Adopt slow, one application at a time.  
make it transparent

andreeeds.github.io

# For Patients, what are potential ethical, governance, and fairness concerns?

# For Patients, what strategies might we use to avoid the issues?

Trust

Ask questions

Consent

Transparency

Trust

Explainability

Security

Better education

Transparency

# For Patients, what strategies might we use to avoid the issues?

empower patients to ask questions

Good doctor-patient relationship.

Timely response

Accessibility of data, working with the AI companies as stakeholders

Giving longer responses 😊

Good doctor-patient relationship

Strong education regarding AI, limited access to software, transparent process

Regulations

Determining liability

# For Insurance Companies, what are potential ethical, governance, and fairness concerns?

# For Insurance Companies, what strategies might we use to avoid the issues?

Using stakeholders!!

Keeping accountable

Consulting an ethics committee

Contextualizing the cases

Follow regulations

Lawyers

Correct reports

Explainable AI

Be ethical!

# For Insurance Companies, what strategies might we use to avoid the issues?

Talk to the business leaders

Diversity

Team diversity

Good communication

accurate ai

Involve the right people in the process

Better understanding of healthcare needs

Education

Education

# For Software Company Leaders, what are potential ethical, governance, and fairness concerns?

privacy  
corrupted data  
bias  
diversity of data  
accuracy  
predictive policing  
accurate predictions  
diverse data  
false pos vs false neg  
data breaches  
data privacy

# For Software Company Leaders, what strategies might we use to avoid the issues?

Setting Appropriate factors eligible to get the parole

Advisory board from all stakeholders

AI experts hiring for better accuracy

Framework for Approval from policymakers

Data from different jurisdictions for diverse set of data

Consider type of crime for false pos vs false neg

Representatives from law enforcement, judicial community, and parolees.

# For Users, what are potential ethical, governance, and fairness concerns?

# For Users, what strategies might we use to avoid the issues?

Negotiating transparency between API and company providing software

Face recognition with face gesture (to ensure user is conscious)

Grouped faces (for trans people, aging people, people in accidents, people who get surgery, etc.)

Iris recognition to check the status of an individual

MFA

Iris recognition to check the status of individuals

Iris recognition

**For Users, what strategies might we use to avoid the issues?**

# For Judges and Court System Administrators, what are potential ethical, governance, and fairness concerns?

# For Judges and Court System Administrators, what strategies might we use to avoid the issues?

Judges should use it as one source of information rather than the only thing that informs their decision.

Judges have the final say

Require representative from all backgrounds

Knowing when and when not to use Ai

Understanding the Limitations of the AI system

committee of experts to oversee the result. Use AI result blindly. Make decision first and then read AI result

Incorporate learning about AI into Law School

Not using AI

# For Business Leaders, what are potential ethical, governance, and fairness concerns?

# For Business Leaders, what strategies might we use to avoid the issues?

More diverse dataset

Secure data

Consultation with ethics experts

Ensure that the data is secure in every stage

Lots of test trials

To the best of your ability, gain a large and updating data set

Screen customers for usage

Educate users of its limitations

Ensuring the company is transparent about how they use the data, keeping data accessible, collaboration with experts, ethical framework with a committee or one person who can ensure fairness

# For Business Leaders, what strategies might we use to avoid the issues?

As a business, prioritise ethics into your business model.

Good lawyers

Being transparent and have the community be liable for using the it with malicious intent

put user authority privileges, so not all employees can access.

Provide explanations

Secure data

Educate our patients about its limitations

andreeeds.github.io

# For Parole Candidates, what strategies might we use to avoid the issues?

Tunnels Jk... maybe an opportunity to overview and explain the data being used to evaluate you

Unbiased data, human oversight, continuous learning

Knowledge

Using representative data

More features recorded including interviews and more subjective measures

I want access to an explanation for the decision. I want a road to release, next time.

Integration of ai with case worker, not stand alone

Transparency

A poster for Rita Hayworth

# For ML Engineers, what are potential ethical, governance, and fairness concerns?

# For ML Engineers, what strategies might we use to avoid the issues?

Secure data server, increase accountability

Limiting malicious use like with chatgpt

Make an attempt to have a balanced dataset

Anonymize data

Policies on data transparency

Open source route encouraged

Data augmentation

Preventing data hoarding

Decentralization

# For ML Engineers, what strategies might we use to avoid the issues?

Be transparent about workflow

Accountability

Be transparent about data collected

Open data, open code, regulations,  
advisory boards,

Clear project scope

T
